Get this development question wrong – and you may well be at risk

- **Question:** True or False, Seat belts are to Driver Safety as Obfuscation is to Application Risk Management. [Read More...](#)

.NET Native; what's it mean for obfuscation and Dotfuscator in particular

- I recently got a question from a client asking why .NET Native (the process of transforming a .NET assembly into a native app to improve performance) did not also make products like Dotfuscator irrelevant. Here's my response (with personal details removed of course). [Read More...](#)

When it comes to application risk management, you can't do it alone

- I'm often asked to estimate how many developers are required to obfuscate and harden their applications against reverse engineering and tampering – and when they say “required,” what they usually mean is what is the bare minimum number of developers that need to be licensed to use our software. [Read More...](#)
