Who We Are

DecisionDesk is a recruitment, application, and enrollment management solution for Higher Education Institutions.

DecisionDesk fills the gaps of an institution's CRM, SIS and Document Imaging system. Our end-to-end application, review, and decision platform provides a single system of record to manage the entire application submission and review process. Unlike existing admissions platforms, DecisionDesk serves as a central collection and distribution point for both critical documents and data, eliminating or streamlining the use of multiple systems. Its ease of use, accessibility, configurability, and efficiency create an incredible admissions experience for applicants, administrators, and reviewers.

We are working in Python and Ruby, and are seeking a mid-level developer that brings several years of experience with Python, Ruby, PHP, Java or C#. You'll be working with a small team, shipping code several times a week. Learn more about our team and submit your application by visiting
